BACKGROUND OF THE INVENTION

0001 This invention consists of a system of commonly used objects which are organized in a less than usual fashion to achieve an other than usual result.

0002 Necklaces vary in their length and their ability to pass over the wearer's head. When the necklaces are too small to pass over their head, some women have a hard time fastening the necklaces in the back of their neck and they choose not to wear them. When there are only a few links, the invention enables a woman to extend a bracelet she could ordinarily not fasten. The invention allows a woman to wear a bracelet or necklace she otherwise would not wear.

BRIEF SUMMARY OF THE INVENTION

0001 The system of chains and different-sized findings creates extensions of the jewelry and enables it's owner to wear a piece of jewelry that she would ordinarily not wear.

BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING

0001 Figure 1 A Top diagram on the drawing.

Figure 1 B Bottom diagram on the drawing

0002 1 A

small O ring on necklace or bracelet
small lobster final on left side of the left half of the extender
large lobster final on the right side of the left half of the extender
large O ring on the left side of the right half of the extender
small O ring on right side of the right half of the extender
small lobster clasp on the necklace or bracelet

0003 1B

small O ring on bracelet or necklace
small lobster clasp on left side of the left half of the extender
large O ring on the right side of the left half of extender
large spring ring on left side of the right half of the extender
small O ring on right side of the right half of the extender
small spring ring on bracelet or necklace

00004 The small lobster clasp of the left half of the extender hooks into the small O ring of the bracelet or necklace. The large lobster clasp at the right end of the left extender hooks into the large O ring on the left side of the right half the extender. The small spring ring on the bracelet or necklace hooks into the small O ring on the right side of the right half of the extender.

BRIEF DESCRIPTION OF THE INVENTION

0001 This invention allows any necklace or bracelet to be converted to one that can be closed more easily because the findings are enlarged. It also allows the jewelry to fit around the neck or wrist.

DETAILED DESCRIPTION OF THE INVENTION

0001 The system consists of two chains with a varied number of links manufactured with different sized findings on each end of each chain.

0002 The invention consists of two chains which hook into each other and in turn each end hooks into the piece of jewelry. The jewelry ordinarily cannot be worn because it is difficult for the person who desires to wear it to close it's clasps.

0003 Each extender chain has different sized findings on each end. On the left end of the
